

Fountain-Controls

Water Level Controls for Fountain Reservoirs

A total packaged solution to provide a constant level of water in your garden fountain reservoir or small garden pond.

ENJOY YOUR FOUNTAIN

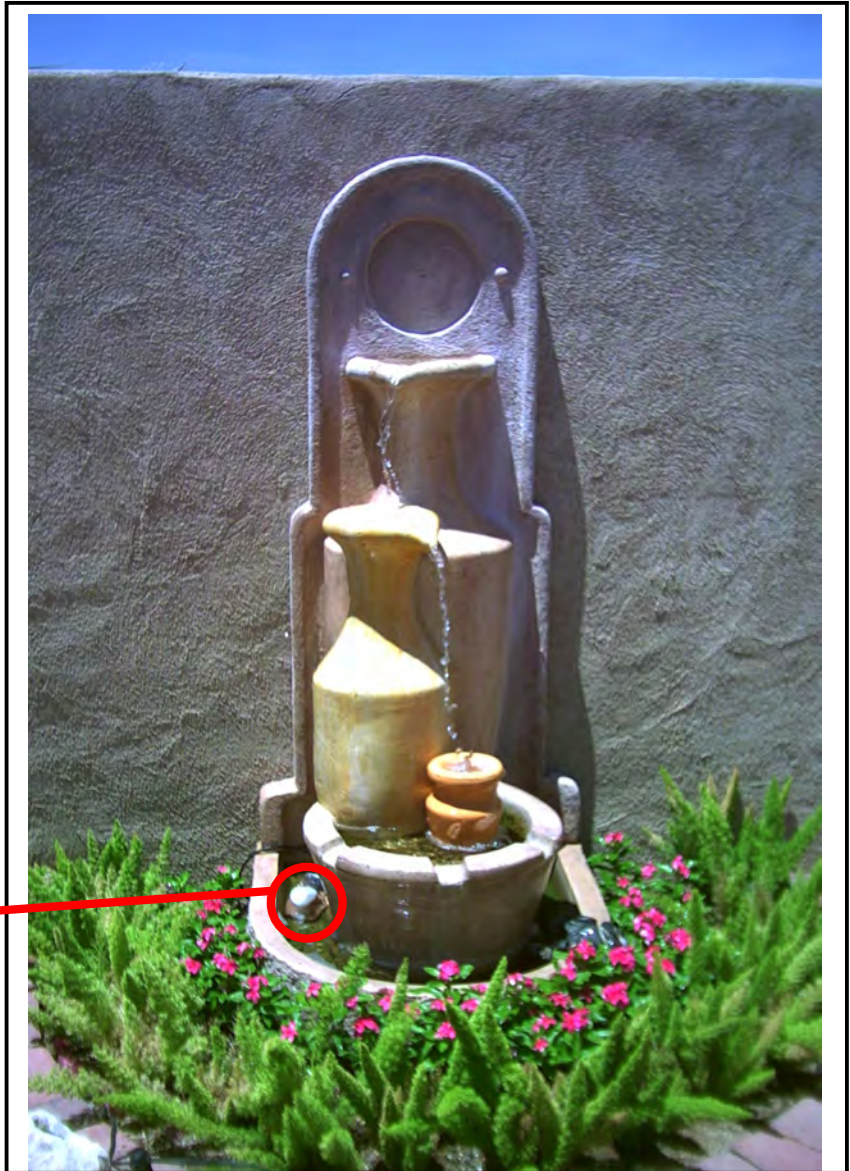

STOP replacing burned out water fountain pumps!

STOP wasting water from fountain over flows when you forget to shut off the water hose!

STOP wasting time manually filling your water fountain reservoir!

Keep your fountain running continuously with no worries of it running dry!

No electricity needed!

A high evaporation rate in a dry climate used to cause the fountain reservoir above to run totally dry in 6 hours. Then a **Fountain-Controls Assembly** was installed and connected to a hose bib outside the courtyard wall. A 3/8" hole was drilled through the wall for the 1/4" flexible water line. Now it runs continuously and never runs dry.

Top view

The Fountain-Controls Assembly (sand color new design shown on the left) comes complete with everything you need to immediately connect to any available water supply line. The assembly includes a flange embedded in a rock base, adjustable float control, 3 feet of 1/4" flexible water line, and the **Fountain-Control Universal Adapter™**.
